

## DECENTRALIZED REPO MARKET OF TOKENS AND COINS

Oxygen is establishing the REPO market in the cryptocurrency paradigm – clear, simple and efficient. It is designed to assist traders and crypto-investors to get the most out of your digital assets and offers support for all ERC20 compliant tokens.

## Gap in the market

- Opportunity for coin- and token-holders to engage with their equity. Today they wait for it to flourish or they sell the assets, regardless of their potential for future growth.
- Opportunity to establish a REPO instrument that offer safe short positions and margin trading in crypto industry.

## How Oxygen works (use case)

## Tokens & why to invest?

The BREATH (bETH) tokens will be used to cover Oxygen's commission fee with respect to trades and contracts. The fee schedule will be similar to the one used by most exchanges, with makers receiving rebates and takers paying full fees at all times.
